

Caitlin Moran

Celebrity Watch

The biologist Dr Emily Grossman, who was consulted for the report, explains: "There are many reasons why our emotions may feel heightened on a flight. Some believe that the slight reduction in oxygen levels at high altitude might affect the levels of serotonin and dopamine in the brain, thus altering our mood and potentially making some of us more susceptible to feelings of sadness."

OR IT MIGHT BE BECAUSE THE HANGOVER IS A TERRIBLE FILM. CW's just putting that out there.
